

EJustice Solutions announces first agency to be implemented under TXDPS grant program. City of Troy in production 8 days after signing.

The City of Troy police department is the first agency, signed by EJustice Solutions under the TXDPS grant program, to be fully implemented and operational.

“EJustice got our RMS implemented and staff trained in 8 days after we chose their system. We were contacted by EJustice the day after we signed and they walked us through the implementation plan. The process was well thought out and the materials were straight-forward which minimized the time it took to get our agency information collected and back to EJustice. The training session was excellent and my officers were using the application that very day” said Chief David Lowry.

The goal of the grant for a Remotely Hosted Records Management System (RRMS) is to improve the effectiveness of the criminal justice community by providing for the timely exchange of documented and reliable information through the use of a system that affords the tools necessary to efficiently collect, evaluate, organize, analyze and disseminate incident and related data.

Troy is one of several dozen new agencies signed by EJustice Solutions under the grant.

“We planned for a significant number of new agencies to come on board which would need to be implemented in a short period of time” noted Sue Olsen, VP Operations at EJustice Solutions. “We devised a repeatable process for implementation and training that allows us to move agencies into production very quickly. Troy is the first agency in the RRMS program to realize one of the key benefits of our hosted solution – a rapid implementation offering immediate value to the agency.”

EJustice Solutions is an industry-leading provider of affordable browser-based [law enforcement record management systems](#). EJustice Solutions Records Management and [Jail Management systems](#) (RMS and JMS) deliver real-time, valuable and actionable information to police and other public safety officers at the point of enforcement, and simplify data exchange across law enforcement agencies and jurisdictions.
